

BOX Training

Intercope's BOX Academy offers professional training classes for users looking to acquire and expand their knowledge of BOX Messaging Hub.

BOX training will enable technical people to install, configure and operate a BOX environment. Some basic Unix knowledge is required (running commands, operation of the editor "vi" etc.) with database and application server know-how an advantage but not essential.

The training includes practical hands-on sessions, installing and configuring BOX with the support and guidance of the trainers.

The BOX training is divided into two separate training classes, BOX Installation and BOX Basic Configuration. Both training classes can be held consecutively or with a break in between.

Training classes

BOX Installation

The week 1 course covers:

- BOX architecture overview
- Introduction to system requirements for BOX installation on Linux
- BOX security setup
- Installation of all BOX components

Each course participant will install all BOX components on their assigned laptop over the course of the 4 days. This will leave the participant with a good knowledge of how all BOX components work together.

BOX Basic Configuration

Week 2 builds on the concepts introduced in week 1 and the knowledge/skills from installing BOX. Each participant in this course will set-up a BOX configuration for a sample bank using standard BOX utilities. This training will introduce GUI based configuration elements including:

- BOX changesets
- BOX User Profile Management (UPM)
- BOX workflow components to create a sample workflow
- Configuration of an interface adapter.

On completion of course 2, each course attendee should have a good working knowledge of BOX, how to install BOX and use the configuration utilities provided with BOX to configure workflows.

Conditions

BOX training is available either in Hamburg or at the customer's site. Training classes and training materials are in English. One or two trainers will be available, the minimum number of participants is three, the maximum number is six. Each attendee will be provided with a training laptop for the sessions.

If not agreed on other times the training courses take place from Monday noon to Friday noon.

Please contact us for a quotation and to schedule a course.
